

# New from PurFybr™ ... Flu Pak™ & Microgent™ Swabs

Solon has you covered. With the acquisition of PurFybr™, we now have a full line-up of diagnostic swabs designed to retrieve and test the optimal virus cultures for all types of Influenza including H1N1.

**The Flu Pak™** includes two diagnostic swabs, a specialized nasopharyngeal plastic/wire handle swab with a polyester tip that is scored for ease of testing and a scored polyester throat swab. Save time and money, and insure the best results for your patients by having both swabs convenient in one sterile package. Clinical studies have shown that taking cultures from both the nasal cavity and throat yield a higher test accuracy.

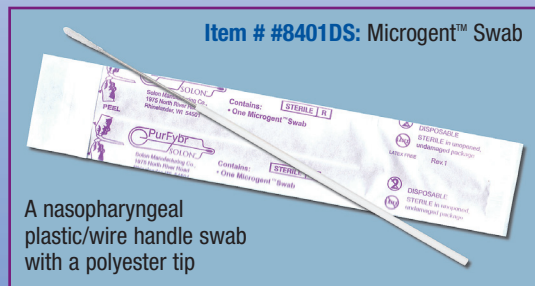

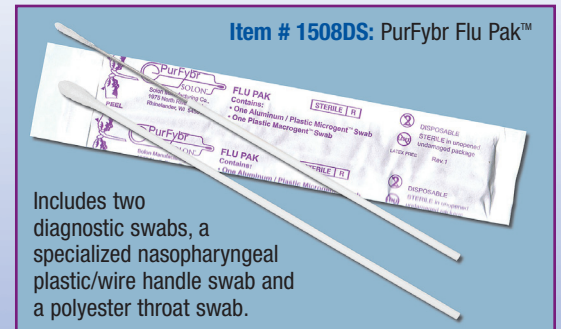

**Microgent™ Nasopharyngeal Swabs** have a plastic handle with a wire shaft topped with a polyester tip. The pliable aluminum wire shaft makes specimen retrieval as comfortable as possible for the patient. The larger plastic handle provides superior grip and control when swabbing.

All our NEW Purfybr™ products are designed to minimize the risk of irritation and contamination during the collection of specimens for a wide range of diagnostic testing, specializing in rapid viral tests.

## Every year in the United States, on average:

- 5% to 20% of the population gets the flu
- More than 200,000 people are hospitalized from flu-related complications
- About 36,000 people die from flu-related causes.

*This Year because of the Swine Flu these figures will at least Triple!*
